Whitebrook Ph.D. Research Programme Graphic

Male suicide bereavement, trauma, men & help-seeking, postvention & peer support etc.

Lived experiences of men bereaved by suicide: impact, coping, support sought / taken up etc.

Exploring barriers and facilitators to postvention uptake & effectiveness; including providers & non-participatory men

Exploring the factors that may determine postvention uptake & effectiveness in men, including nonparticipatory men (demographics, loss, stigma, attitudes, wellness etc.)

Unique Contribution:

Possible Impacts:

- Essential insights into the factors impacting UK & Ireland adult males bereaved by suicide, and how postvention approaches require modification to meet their needs
- Greater awareness and understanding, facilitating a more unified approach to suicide postvention
- Description, and enablement, of a key role for male survivors in determining the approach to postvention

Broad Literature Review: Cross-sectional overview of

postvention in male context

Meta-ethnography: Review of male postvention

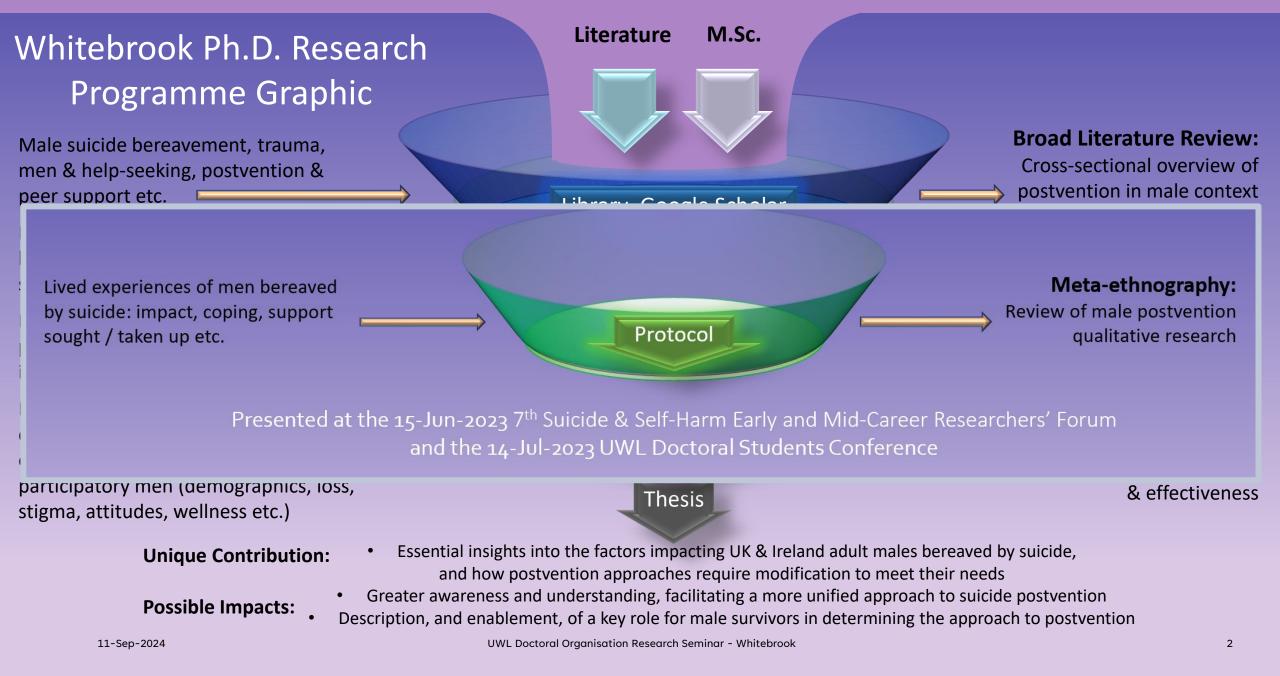

qualitative research

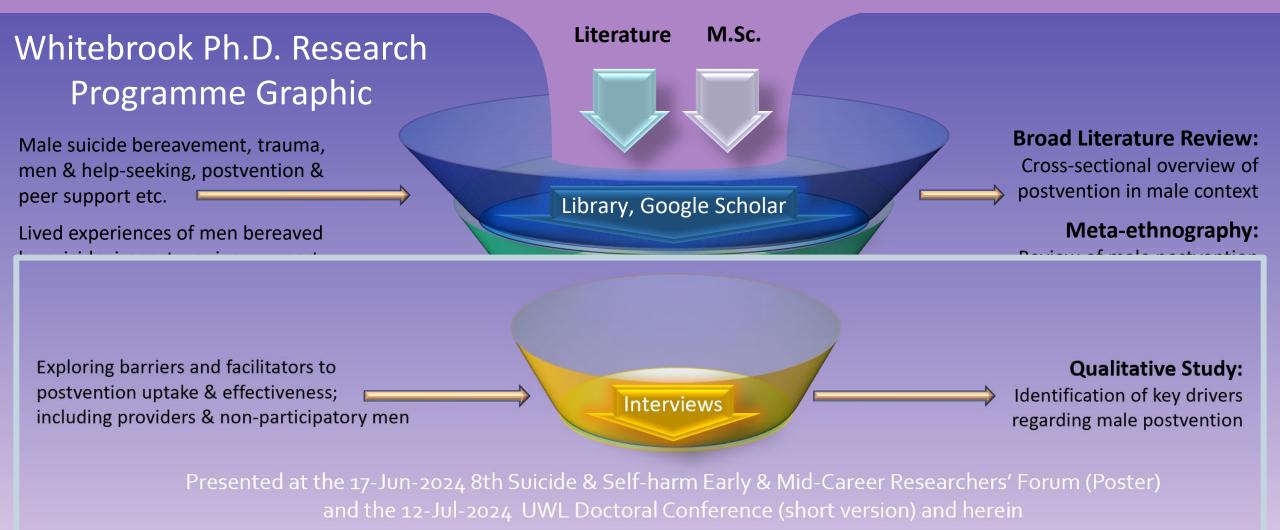

Qualitative Study:

Identification of key drivers regarding male postvention

Quantitative Study:

Contribution of main drivers for male postvention uptake & effectiveness

Unique Contribution:

Essential insights into the factors impacting UK & Ireland adult males bereaved by suicide, and how postvention approaches require modification to meet their needs

Possible Impacts:

- Greater awareness and understanding, facilitating a more unified approach to suicide postvention
- Description, and enablement, of a key role for male survivors in determining the approach to postvention

and the 12-Jul-2024 UWL Doctoral Conference (short version) and herein

Unique Contribution:

 Essential insights into the factors impacting UK & Ireland adult males bereaved by suicide, and how postvention approaches require modification to meet their needs

Possible Impacts:

- Greater awareness and understanding, facilitating a more unified approach to suicide postvention
- Description, and enablement, of a key role for male survivors in determining the approach to postvention

What is postvention?

Suicide & bereavement rates?

Why Men?

"Since the seminal publications of Shneidman (1969) and Cain (1972), postvention, that is, the 'activities developed by, with or for suicide survivors, in order to facilitate recovery after suicide and to prevent adverse outcomes including suicidal behaviour'...has attracted increased clinical and research interest." (Andriessen, 2014)

c. 76ok annual suicide deaths globally – 69% male (Ilic & Ilic, 2022)
Exposure to suicide c. 48 million p.a. (Quayle et al., 2023*)
Others estimate 135 exposed per suicide (Cerel, 2019[†])
UK & Ireland annual suicides c. 7,000 (Govt. stats.)
Implies c. 442k* – 945k[†] people exposed p.a. in UK & Ireland
Suicide loss survivors 65% ↑ risk of suicide (Pitman et al., 2016)

Studies of bereavement support services are dominated (80-91%) by female participation (Andriessen, 2014)

What is postvention?

Since the seminal publications of Shneidman (1969) and Cain (1972), postvention, that is, the "activities developed by, with or for suicide survivors, in order to facilitate recovery after suicide and to prevent adverse outcomes including suicidal behaviour"

Postvention is prevention (Jordon, 2017)

 \sim UK & Irelatiu attitudi sulciues C. /,000 (GOVL SLats.)

- Implies c. 442k* 945k* people exposed p.a. in UK & Ireland
- Suicide loss survivors 65% ↑ risk (Pitman et al., 2016)

Why Men?

Studies of bereavement support services are dominated (80-91%) by female participation (Andriessen, 2014)

Semi-structured, online (MS Teams) interviews with:

- Service providers incl. female participants to get perspective on male behaviour
- > Service users males actively participating in postvention activities
- > Service (potential) users males never participated or have but withdrawn
- > Service users females to get independent perspective on male behaviour
- > Academic experts in the field of suicide bereavement (likely female!)

UK							Ireland				
Pr	Provider User			Ex.	Pro	ovider	User			Ex.	
Male	Female	Male↑	Male↓	Female↑		Male	Female	Male↑	Male↓	Female↑	
1	1	2	6	2	1	1	1	2	6	2	1

Key: ↑ does participate in postvention, ↓ does not participate in postvention, Ex. = Academic Expert, N = 26

Demographic information

Simone ⁺			Father	54	М	40		
	54	F	Son	23	М	10		

>> Mother, father and brother of the same 18-year-old man lost

> Brother and sister of the same female 53-year-old female sibling lost

> 26 interviews conducted 28-Feb-2024 to 06-Sep-2024 (a little over six months)

Mean age of participants* 51.5 (range 20 – 68)

> Mean age of person lost 39^{+} (range 11 - 63)

> Mean time since loss 9.4^{\dagger} (range <1-45)

† Two participants has each lost two people to suicide

* Providers had experienced loss, but academics had not, so N = 24

Demographic information								
Pseudonym	Age	Sex	Relationship	Age of person lost	Sex of the person lost	Years since loss		
Rebecca	25	F	Father	57	М	2		
Graham	66	М	Brother	58	М	2		
Keith	65	М	Sister	53	F	10		

Participants M = 18, F = 8: F includes two academics, no suicide loss
 Those lost M = 18 (70%), F = 8 (30%): two participants each lost two males
 Statistical loss ratios are 3 – 4 M: 1 F for UK & Ireland (Samaritans, 2024)
 Sample close to typical statistical M:F ratios

Statistics show that regional socio-economic factors impact rates
 Sample atypical (by design) in terms of largely male participation

Mean age of person lost 39⁺ (range 11 – 63)
 Mean time since loss 9.4⁺ (range <1 – 45)

† Two participants has each lost two people to suicide

* Providers had experienced loss, but academics had not, so N = 24

A meta-ethnography of male suicide bereavement qualitative research (Study 1)

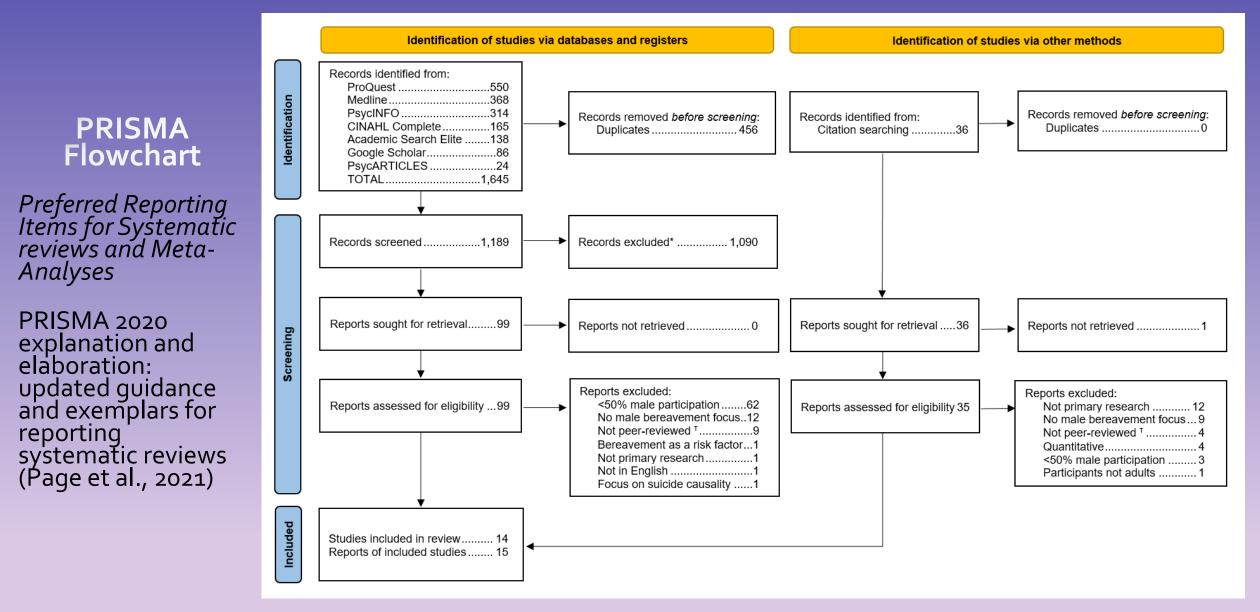

Meta-Ethnography: Synthesizing Qualitative studies (Noblit & Hare, 1988):

- > The synthesis of interpretive research
- > Involves the translation of studies into one another
- The translation of studies takes the form of an analogy between and/or among the studies
- \succ 'making a whole into something more than the parts alone imply'

Improving reporting of meta-ethnography: The eMERGe reporting guidance (France et al., 2019):

- To provide guidance to improve the completeness and clarity of meta-ethnography reporting
- Recommendations and good practice for all seven phases of meta-ethnography conduct and reporting were newly identified leading to 19 reporting criteria and accompanying detailed guidance

A meta-ethnography of male suicide bereavement qualitative research (Study 1)

IMPACT: questioning of own existence and purpose (including suicidal ideation); searching for answers...

DISTRESS: shock, anger, fear, guilt, agony, grief, anxiety, denial, depression, injustice... BLAME: judgement, disrespect, low empathy, religious dogma; selfblame leading to withdrawal... HEALTHCARE & SUPPORT: deceased's mental health / selfharm or suicide attempts; let down by healthcare system...

RESPONSIBILITY: failure to keep the deceased safe; protective towards other survivors... CULTURE: taboo regarding suicide and mourning; systemic broad and long-term denial...

MEMORIALISATION: lost futures, pride and personal growth, spirituality; relief...

Proposed Suicide Bereavement Model

Postvention Enablers

- Provide information men can digest is their own time/'menu' of options
- Activities with implicit suicide bereavement support/ informal support
- Activities with a physical/outdoor component
- Female accompaniment and lack of pressure to speak
- Hybrid meetings (don't have to walk into a room of mainly women)
- Men-only suicide bereavement peer-support groups
- Overt encouragement of men to share their feelings i.e. don't reinforce stereotype by leaving them to internalise emotions
- Involvement in advocacy for bereavement charity
- Realisation that other people can truly help and are strong
- Accepting that multiple approaches are needed
- Peer support others that 'get it'
- Psychoeducation: understanding suicide bereavement & grieving styles (bereaved & society as a whole, with a start at school age)
- Provision of suicide bereavement support by default
- Metrics on the better outcomes for those that engage*
- Writing/journalling (more women tend to do this)
- Counsellors/therapists with first-hand suicide bereavement experience

Attitude Shifts

Societal Shifts

Postvention Barriers

- Pressure (real or perceived) to talk about emotions
- Societal expectations of stoicism/fear of showing weakness
- Avoidance/denial & fatalism
- Feeling a responsibility 'fix' things (in a mixed group)
- Family/friends support directed towards females
- Female dominance in activities (self-fulfilling prophecy)
- Delegation of grieving to females
- Can't match other men e.g. 'Three Dads Walking'
- Men-only MH groups not having suicide bereavement focus
- Financial constraints (prioritise females): breadwinner role
- Lack of workplace bereavement policy: breadwinner role
- Pathologizing suicide bereavement/grief (labelling)
- Lack of support groups focused on specific relationship loss
- Anger focus: person lost/healthcare/coroner etc.
- Hinder post-traumatic growth
- Cultural taboo/religious pressure to deny/ignore the suicide
- Lack of/poor signposting of support available
- Limited geographical coverage of services

Male specific

List of Barriers presented in June/July based on the first 10 interviews

Predominately male

General

Postvention Barriers

- Pressure (real or perceived) to talk about emotions
- Societal expectations of stoicism/fear of showing weakness
- Denial & fatalism
- Feeling a responsibility 'fix' things (in a mixed group)
- Family/friends support directed towards females
- Female dominance in activities (self-fulfilling prophecy)
- Delegation of grieving to females ('park emotions')
- Can't match other men e.g. 'Three Dads Walking'
- Men-only MH groups not having suicide bereavement focus
- Financial constraints (prioritise females): breadwinner role
- Lack of workplace bereavement policy: breadwinner role
- Pathologizing suicide bereavement/grief (labelling)
- Lack of support groups focused on specific relationship loss
- Anger focus: person lost/healthcare/coroner etc.
- Hinder post-traumatic growth
- Cultural taboo/religious pressure to deny/ignore the suicide
- Lack of/poor signposting of support available
- Limited geographical coverage of services

List of Barriers based on 26 interviews

- Fear of triggering/struggle with others pain/imposter syndrome
- Stigmatisation by association/embarrassment
- Lack of awareness of prevalence and others in the same situation
- The 'S' word!
- Perception that others don't want to talk about it
- People don't ask men how they're doing (meaningfully) disenfranchised grief
- Focus on work (avoidance) and/or substance abuse typically alcohol
- Admission of failure (esp. if lost a child) guilt
- Fear of admission of trauma (memory, chronology, mental health issues, PTSD) and consequences (potential cascade effect)
- Macho cool to be callous! (younger males)
- Struggle with unknowns of loss/comprehend rationale for the act
- Frustrations with 'the system' e.g., GPs and lack of direction
- Fear of being palmed-off with anti-depressants (associated stigma)

Postvention Barriers

- Pressure (real or perceived) to talk about emotions
- Societal expectations of stoicism/fear of showing weakness
- Denial & fatalism
- Feeling a responsibility 'fix' things (in a mixed group)
- Family/friends support directed towards females
- Female dominance in activities (self-fulfilling prophecy)
- Delegation of grieving to females ('park emotions')

- Men-only MH groups not having suicide bereavement focus
- Financial constraints (prioritise females): breadwinner ryle
- Lack of workplace bereavement policy: breadwinner role
- Pathologizing suicide bereavement/grief (labelling)
- Lack of support groups focused on specific relationship loss
- Anger focus: person lost/healthcare/coroner etc.
- Hinder post-traumatic growth
- Cultural taboo/religious pressure to deny/ignore the suicide
- Lack of/poor signposting of support available
- Limited geographical coverage of services

• Fear of triggering/struggle with others pain/imposter syndrome

- Stigmatisation by association/embarrassment
- Lack of awareness of prevalence and others in the same situation
- The 'S' word!
- Perception that others don't want to talk about it
- People don't ask men how they're doing (meaningfully) disenfranchised grief
- Focus on work (avc.dance) and/or substance abuse typically alcohol
- Admission of fail/are (esp. if lost a child) guilt
- Fear of admission of trauma (memory, chronology, mental health issues, PTSD) and consequences (potential cascade effect)
- Macho c Jol to be callous! (younger males)
- Strugg'e with unknowns of loss/comprehend rationale for the act
- Frus'.rations with 'the system' e.g., GPs and lack of direction
- Fear of being palmed-off with anti-depressants (associated stigma)

Family/friends Dynamics

Key: Male specific / Predominately male / General

Emerging Themes

Postvention Barriers

- Pressure (real or perceived) to talk about emotions
- Societal expectations of stoicism/fear of showing weakness
- Denial & fatalism
- Feeling a responsibility 'fix' things (in a mixed group)
- Family/friends support directed towards females
- Female dominance in activities (self-fulfilling prophecy)
- Delegation of grieving to females ('park emotions')
- Can't match other men e.g. 'Three Dads Walking'
- Men-only MH groups not having suicide bereaven ent focus
- Financial constraints (prioritise females): breadwinner role
- Lack of workplace bereavement policy: breadwinner role
- Pathologizing suicide bereavement/grief (labelling)
- Lack of support groups focused on specific relationship loss
- Anger focus: person lost/healthcare/coroner etc.
- Hinder post-traumatic growth
- Cultural taboo/religious pressure to deny/ignore the cuicide
- Lack of/poor signposting of support available
- Limited geographical coverage of services

Emerging Themes

- Fear of triggering/struggle with others pain/imposter syndrome
- Stigmatisation by association/embarrassment
- Lack of awareness of prevalence and others in the same situation
- The 'S' word!
- Perception that others don't want to talk about it
- People don't ask men how they're doing (meaningfully) disenfranchised grief
- Focus on work (avoidance) and/or substance abuse typically alcohol
- Admission of failure (esp. if lost a child) guilt
- Fear of admission of trauma (memory, chronology, mental health issues, PTSD) and consequences (potential cascade effect)
- Micho cool co be callous! (younger males)

S ruggle with unknowns of loss/comprehend rationale for the act I rustrations with 'the system' e.g., GPs and lack of direction Fer of being palmed-off with anti-depressants (associated stigma)

Anxiety

Postvention Barriers
